

Input

Source Proteome X

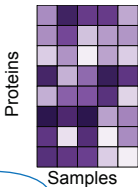

1. Local Anchor Component

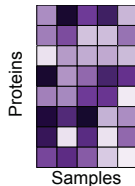

Anchor Estimate: $\hat{y}_j^A = \hat{\beta}_j X_j$

Output

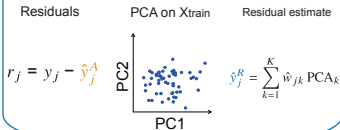

Imputed Proteome $\hat{Y}$

Target Proteome Y

2. Global residual component

3. Reliability-aware fusion

$$\hat{y}_j = w_j \hat{y}_j^A + (1 - w_j) \hat{y}_j^R$$
